

ASMIRT Qld Branch presents

THE PATIENT EXPERIENCE

NAVIGATING CARE FOR AUTISTIC PATIENTS

Autism spectrum disorder (ASD) can present unique challenges for the patient-practitioner interaction within the healthcare setting. To ensure patients with ASD have positive experiences and outcomes within our departments, we must adapt our patient care and expand our knowledge in this field.

Join us for this event as we examine how we can improve the patient experience for those with ASD by gaining insight into what ASD is, discussing the various needs that may need to be met during clinical interactions for patients with ASD and exploring the unique challenges that may arise for MRS practitioners.
